Recall #: P0A08 | MUR QST BRK FLD FLH NTB21047 Recall Date: 2021 May 27

Recall Description

A potential chemical reaction between the valve surface coating (Chromate layer) and the DOT3 brake fluid may cause a Gel to form around the normally closed (NC) valve. In some cases, it can cause the NC valve to be stuck open. The NC valve inside the ABS actuator may stick open and direct additional brake fluid flow to a reservoir inside the ABS actuator. As a result, the brake fluid pressure may fluctuate and the customer may experience increased brake pedal travel.

Remedy

All affected vehicles will have the brake fluid replaced (DOT3 to DOT4 fluid). Dealers will inspect the ABS actuator using Consult. If needed, the ABS actuator will be replaced. An owner s manual insert will be provided to customers with instruction to use DOT4 brake fluid to prevent the subject condition from reoccurring, and the brake fluid reservoir cap will be changed. This service, which is conducted at no charge to you for parts and labor, could take up to four and a half (4.5) hours to complete depending on the inspection results. However, your Nissan dealer may require your vehicle for a longer period of time based upon their work schedule or if the ABS actuator requires replacement.
