Open Recalls

Recall #: R0128 | SONATA ANCHOR PRETENSIONER INSPECTION Recall Date: 2017 Apr 01

Recall Description

On certain vehicles, the connections between the front seat belts and the floor mounted seat belt anchor pretensioners may not have been attached properly during assembly. This could result in a front seat belt possibly detaching from the anchor pretensioner. If the vehicle were to be involved in a collision, and the seat belt were to detach, it could increase the risk of injury to the seat occupant. Correction: Dealers will verify the connection between the seat belt linkage and the anchor pretensioner's cable connector for both front seat belts and repair as necessary.

5NPEB4AC3DH521853

Recall #: R0130 | SONATA / SANTA FE ENGINE INSPECT / REPLACE Recall Date: 2017 Jun 23

Recall Description

On certain vehicles equipped with 2.0L and 2.4L engines, the engine may contain residual metallic debris from factory machining operations. If debris is present, it could potentially restrict oil flow to the main bearings and rod bearings and could lead to premature wear. If the vehicle continues to be driven with worn bearings, the bearings could fail, which could cause an engine stall while the vehicle is in motion, resulting in loss of motive power which could increase the risk of a crash causing injury and/or property damage.

Recall #: R0153 | Product Improvement Campaign - KSDS Update Recall Date: 2018 Sep 01

Recall Description

Issue: Hyundai Auto Canada is conducting a Product Improvement Campaign that provides an update to the engine control module to detect potential problems before an engine fails. An engine failure would cause a sudden loss of power with an inability to restart. Safety Risk: A sudden loss of engine power could increase the risk of an accident. Corrective Actions: The company will notify owners by mail. Owners will be instructed to take their vehicle to a dealer to update the software for the engine control module. Note: The Transport Canada Campaign number was changed to 2019-640. Vehicles previously repaired under Transport Canada Campaign number 2019-130 do not require this software update. Recall #: R0144 | Airbag Control Unit - Wiring Repair Recall Date: 2018 Sep 30

Recall Description

On certain gasoline and hybrid engine vehicles, the circuits within the airbag control unit may become damaged. This could cause the airbags and seat belt pretensioners to not deploy in certain collisions where deployment is warranted, which could increase the risk of injury to vehicle occupants. Correction: dealers will install an external wire filter kit that will prevent electrical overstress in the airbag control unit.
